1/4 Duty General-Purpose LCD Drivers

Overview

The LC75834E, LC75834W, and LC75834JE are 1/4-duty general-purpose LCD drivers that can be used for frequency display in electronic tuners under the control of a microcontroller. The LC75834E and LC75834W can drive an LCD with up to 136 segments directly, the LC75834JE can drive an LCD with up to 120 segments directly. The LC75834E and LC75834W and LC75834JE can also control up to 8 general-purpose output ports. Since the LC75834E, LC75834W, and LC75834JE use separate power supply systems for the LCD drive block and the logic block, the LCD driver block power-supply voltage can be set to any voltage in the range 2.7 to 6.0 volts, regardless of the logic block power-supply voltage.

Features

- Supports both 1/4 duty 1/2 bias and 1/4 duty 1/3 bias LCD drive under serial data control.
  LC75834E, LC75834W: up to 136 segments
  LC75834JE: up to 120 segments
  (without the S9, S18, S27, S34 segment output pins from the LC75834E, LC75834W)
- Serial data input supports CCB* format communication with the system controller.
- Serial data control of the power-saving mode based backup function and all the segments forced off function
- Serial data control of switching between the segment output port and the general-purpose output port functions
- High generality, since display data is displayed directly without decoder intervention.
- Independent V_{LCD} for the LCD driver block (V_{LCD} can be set to any voltage in the range 2.7 to 6.0 volts, regardless of the logic block power-supply voltage.)
- The $\overline{INH}$ pin can force the display to the off state.
- RC oscillator circuit

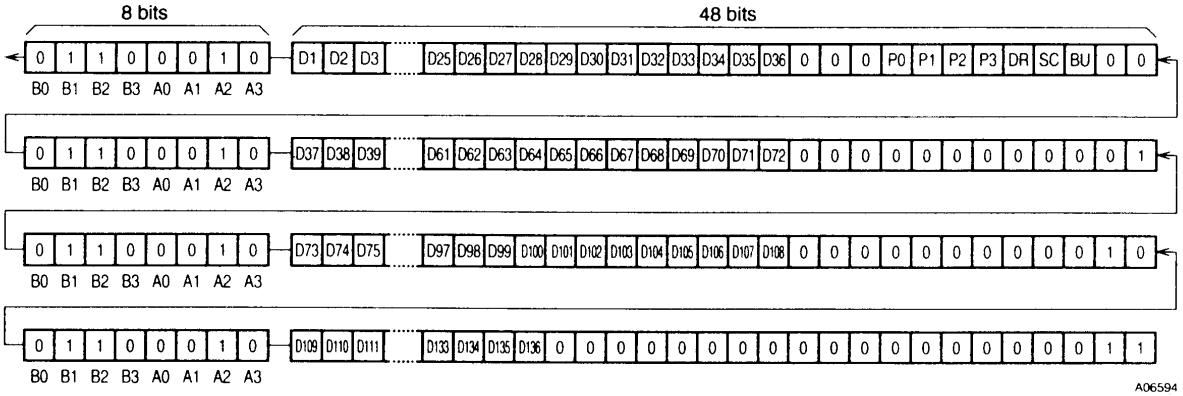
Serial Data Transfer Examples

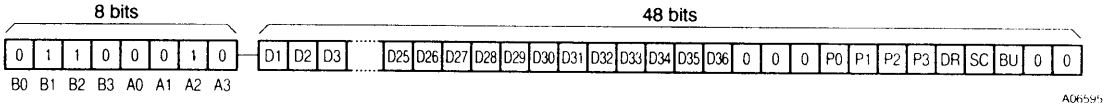
- At the LC75834E and LC75834W when109 or more segments are used, at the LC75834JE when 97 or more segments are used,192 bits of serial data must be sent.



Note: At the LC75834JE, the display data D33 to D36, D69 to D72, D105 to D108, D133 to D136 must be set to 0.

- At the LC75834E and LC75834W when used with less than 109 segments, at the LC75834JE when used with less than 97 segments, transfer either 48 bits, 96 bits or 144 bits of serial data depending on the number of segments used. However, the serial data shown in the figure below (the display data D1 to D36 and the control data) must be sent.

Note: At the LC75834JE, the display data D33 to D36 must be set to 0.



Control Data Functions

1. P0 to P3: Segment output port/general-purpose output port switching control data.
   These control data bits switch the S1/P1 to S8/P8 output pins between their segment output port and general-purpose output port functions.

Control data				Output pin states							
P0	P1	P2	P3	S1/P1	S2/P2	S3/P3	S4/P4	S5/P5	S6/P6	S7/P7	S8/P8
0	0	0	0	S1	S2	S3	S4	S5	S6	S7	S8
0	0	0	1	P1	S2	S3	S4	S5	S6	S7	S8
0	0	1	0	P1	P2	S3	S4	S5	S6	S7	S8
0	0	1	1	P1	P2	P3	S4	S5	S6	S7	S8
0	1	0	0	P1	P2	P3	P4	S5	S6	S7	S8
0	1	0	1	P1	P2	P3	P4	P5	S6	S7	S8
0	1	1	0	P1	P2	P3	P4	P5	P6	S7	S8
0	1	1	1	P1	P2	P3	P4	P5	P6	P7	S8
1	0	0	0	P1	P2	P3	P4	P5	P6	P7	P8

Note: Sn (n = 1 to 8): Segment output ports
Pn (n = 1 to 8): General-purpose output ports

Also note that when the general-purpose output port function is selected, the output pins and the display data will have the correspondences listed in the tables below.

Output pin	Corresponding display data
S1/P1	D1
S2/P2	D5
S3/P3	D9
S4/P4	D13

Output pin	Corresponding display data
S5/P5	D17
S6/P6	D21
S7/P7	D25
S8/P8	D29

For example, if the output pin S4/P4 has the general-purpose output port function selected, it will output a high level (V_{LCD}) when the display data D13 is 1, and will output a low level (V_{SS}) when D13 is 0.

2. DR: 1/2-bias drive or 1/3-bias drive switching control data
   This control data bit selects either 1/2-bias drive or 1/3-bias drive.

DR	Drive type
0	1/3-bias drive
1	1/2-bias drive

3. SC: Segments on/off control data
   This control data bit controls the on/off state of the segments.

SC	Display state
0	On
1	Off

However, note that when the segments are turned off by setting SC to 1, the segments are turned off by outputting segment off waveforms from the segment output pins.

4. BU: Normal mode/power-saving mode control data
   This control data bit selects either normal mode or power-saving mode.

BU	Mode
0	Normal mode
1	Power saving mode (The OSC pin oscillator is stopped, and the common and segment output pins go to the VSS level. However, the S1/P1 to S8/P8 output pins that are set to be general-purpose output ports by the control data P0 to P3 can be used as general-purpose output ports.)

Note: This applies to the case where the S1/P1 to S8/P8 output pins are set to be segment output ports.
The LC75834JE do not have the S9, S18, S27, S34 output pins.

For example, the table below lists the segment output states for the S11 output pin.

The $\overline{INH}$ pin and Display Control

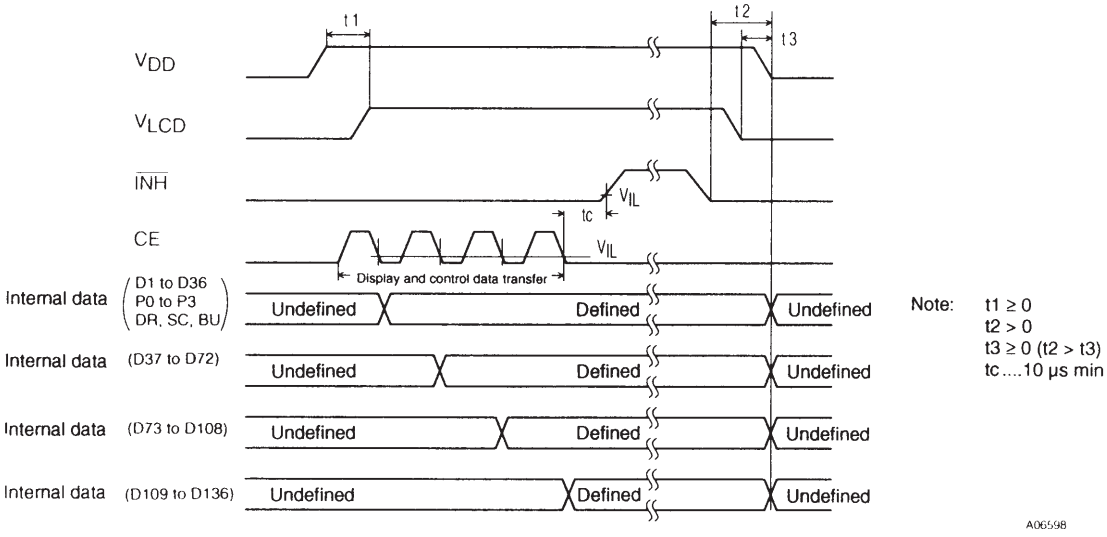
Since the LSI internal data (the display data and the control data) is undefined when power is first applied, applications should set the $\overline{INH}$ pin low at the same time as power is applied to turn off the display (LC75834E, LC75834W: This sets the S1/P1 to S8/P8, S9 to S34, and COM1 to COM4 to the V_{SS} level. LC75834JE: This sets the S1/P1 to S8/P8, S10 to S17, S19 to S26, S28 to S33, and COM1 to COM4 to the V_{SS} level.) and during this period send serial data from the controller. The controller should then set the $\overline{INH}$ pin high after the data transfer has completed. This procedure prevents meaningless displays at power on. (See Figure 3.)

Notes on the Power On/Off Sequences

Applications should observe the following sequence when turning the LC75834E, LC75834W, and LC75834JE power on and off.

- At power on: Logic block power supply (V_{DD}) on → LCD driver block power supply (V_{LCD}) on
- At power off: LCD driver block power supply (V_{LCD}) off → Logic block power supply (V_{DD}) off

However, if the logic and LCD driver block use a shared power supply, then the power supplies can be turned on and off at the same time.



Note: At the LC75834JE, the display data D33 to D36, D69 to D72, D105 to D108, D133 to D136 must be set to 0.

Notes on Controller Transfer of Display Data

Since the LC75834E, LC75834W, and LC75834JE accept display data divided into four separate transfer operations, we recommend that applications transfer all of the display data within a period of less than 30 ms to prevent observable degradation of display quality.
